Martinsried GERNANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2): Email s.wiemann@kf2-heidelberg.de;
sequenced by MediGenomix (Martinsried/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKF2P761141) is available at the RZPD in Berlin. Please contact
the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANY: Email: clone@rzpd.de Further
information about the clone and the sequencing project is available
at http://mips.gsf.de/proj/cDNA/.

Laborited (22-NOV-2001) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk on Nov 25, 2001 this sequence version replaced gi:3204432.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL: Sw: SWISSPROT; Tr:, TREMBL: Wp:, WORMPEP; Information on the WORMEPE database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
                          PRI 22-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/HGP/Chr22
RPI-257120 is from the library RPCI-1 constructed by the group of
pieter de Jong. For further details see

It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11437 114436: gap of 100 bp 114437 1131441 220770: contig of 89330 bp in length Location/Qualifiers

RESULT 13
US-09-425-043-8/C
Sequence 8, Application US/09425043
Patent No. 6335172
GENERAL INFORMATION:
APPLICANT: DELGADO, STEPHEN G.
APPLICANT: DELGADO, STEPHEN G.
APPLICANT: APPLICANT: AND M.
APPLICANT: APPLICANT: AND M.
APPLICANT: APPLICANT: AND M.
TITLE OF INVENTION: NOVEL CLONED TETRODOTOXIN-SENSITIVE
TITLE OF INVENTION: SODIUM CHANNEL I-SUBUNIT AND A SPLICE VARIANT THEREOF
NUMBER OF SEQUENCES: 43
CORRESPONDENCE ADDRESS:
ADDRESSEE: JANET PAULINE CLARK
US-09-024-020B-8/c

## GENERAL INFORMATION:
## APPLICANT: Rosen et al.
## TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
## FILE REFERENCE: PA105
## CURRENT APPLICATION NUMBER: US/09/925,297
## CURRENT FILING DATE: 2001-08-10
## PRIOR APPLICATION NUMBER: PCT/USO0/05989
## PRIOR APPLICATION NUMBER: PCT/USO0/05989
## PRIOR FILING DATE: 1999-03-12
## NUMBER OF SEQ ID NOS: 928
## SOFTWARE: Patentin Ver. 2.0
## SEQ ID NO 306
                                                                                                                                                                                                                                                                                  GENERAL INFORMATION

GENERAL INFORMATION

TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
